# DO YOUR COWS EAT WHAT YOU ARE FEEDING THEM?

Trevor DeVries

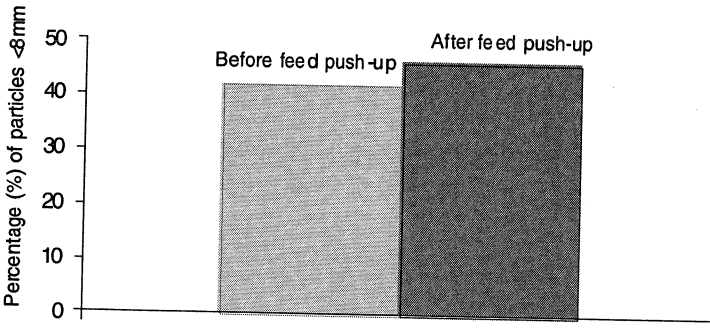

### Small particle content of a TMR decreases from the time of feeding

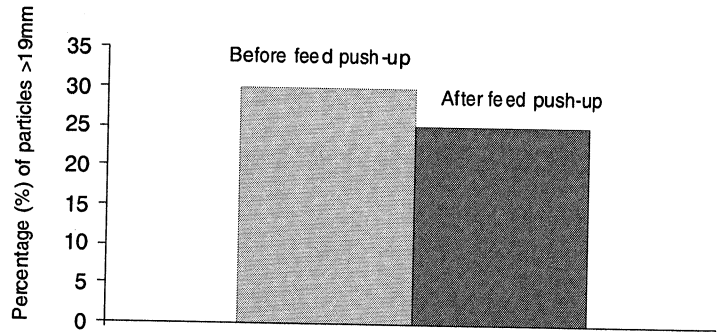

### Large particle content of a TMR increases from the time of feeding

### Feed push-up increases the content of small particles in a TMR

### Feed push-up decreases the content of large particles in a TMR

**IMPLICATIONS:** Feed analysis shows that there are fewer small particles and more large particles in the hours after feeding. These changes in feed quality can be reduced by feeding multiple times a day and pushing up feed throughout the day.
